

Tata Consultancy Services

Trading Comparables

NSE: TCS · US\$ millions unless stated · share prices in local currency · as of prices 12 Sep 2026 · LTM to Jun 2026

A comparable-companies analysis for Tata Consultancy Services against eight Indian and global IT-services peers: peer selection with stated criteria, currency normalisation (Infosys reports in US\$ while trading in INR), enterprise-value construction, LTM and calendarised forward multiples, peer statistics and the implied valuation range for TCS.

What this is

- LTM figures are the sum of the last four reported quarters, so fiscal-year differences do not affect trailing multiples; forward figures are calendarised to TCS's FY2027 by month-overlap weights.

How it is built

- EV = market cap + total debt + minority interest – cash and short-term investments; every component converted to US\$ at the rate for its own currency (statements and share price can differ).
- Statistics exclude the target; the implied range applies the peer interquartile range of each multiple to TCS's own metric and bridges back to an INR price per share.
- Peer-selection criteria and exclusions are written down on the Inputs sheet, because that is where the judgement in a comps page lives.

Contents

[Summary](#) — TCS metrics and the implied per-share range from peer multiples
[Inputs](#) — FX, target, calendarisation window, peer-selection rationale
[Data](#) — raw pulls in reporting currency
[Comps](#) — US\$ normalisation, EV build, LTM and calendarised multiples, peer statistics
[Calendarisation](#) — worked example of aligning March and December fiscal years
[Checks](#) — integrity checks

Key outputs (live)

TCS EV / LTM EBITDA	10.4x
Peer median EV / LTM EBITDA	8.7x
TCS P/E (CY2027, calendarised)	14.2x
Implied price range, median across methods (INR)	1,848
Current price (INR)	2,201
Model status	MODEL OK

Range across methods (INR)					1,215	1,848	2,942
Current share price (INR)						2,201	
Median implied vs current						(16.0%)	

READING THE RESULT

- TCS trades at a premium to the peer median on every multiple, which is its long-standing position: highest margins in the group, lowest client-concentration risk, and a Tata parent. The question a comps page answers is whether today's premium is larger or smaller than usual, not whether it exists.
- The Indian large caps cluster tightly; the global names (Accenture, Cognizant, EPAM) trade lower because of slower growth and, in 2026, the AI-disruption discount on outsourcing. Mixing the two tiers widens the range; a banker would show both tiers and let the client see the gap.

- Calendarised forward multiples are the ones institutional investors quote. The LTM columns are shown because they are the only ones that need no estimates and therefore no judgement.
- The implied range is a market-based anchor for the football field (Project 5). It says what the market pays for businesses like this today; it says nothing about what TCS is intrinsically worth (Project 2's question).

FX rates, target and the peer-selection rationale

FX (units of local currency per US\$) AND TARGET		
USD per INR (1 / USDINR)	0.010467	USDINR = 95.54, Yahoo Finance 12 Sep 2026
USD per USD	1.000000	
Target ticker	TCS.NS	The company being valued; excluded from peer statistics
Calendarisation window start	2026-04-01	TCS fiscal year FY2027: 1 Apr 2026 – 31 Mar 2027
Calendarisation window end	2027-03-31	
Minimum peer market cap (US\$m) for statistics	5,000	Excludes tiny names from the range; set to 0 to include all

PEER SELECTION	
Criteria	IT services and consulting with offshore delivery; revenue > US\$1bn; listed with liquid trading; LTM financials available. Two tiers: Indian large caps (the direct peers) and global consulting/services names (the customers' alternative suppliers).
Included	Infosys, HCLTech, Wipro (India large-cap); Tech Mahindra, Persistent (India mid-cap, higher growth, smaller); Accenture, Cognizant, EPAM (global).
Excluded	LTIMindtree and Capgemini: no usable data on the free feed (LTIMindtree would otherwise be included). Mphasis and Coforge: under the size threshold. IBM: conglomerate mix. Tata Elxsi: engineering R&D, different economics.
Data quirks handled	Infosys reports IFRS statements in US\$ while its shares trade in INR; the statements currency is detected and every figure is normalised to US\$ before any multiple is computed. Consensus estimates are in the share-price currency for all names.

Tata Consultancy Services — Trading Comparables

TATA CONSULTANCY SERVICES

Why a March-year company cannot be compared to a December-year company without adjustment

METHOD

Consensus estimates are quoted for each company's own fiscal year. To compare TCS (year to 31 March) with Cognizant (year to 31 December) on a forward multiple, both must be expressed over the same twelve months. This workbook calendarises every peer to TCS's FY2027 (1 Apr 2026 – 31 Mar 2027): weight w_0 on the consensus year that ends inside the window and $(1 - w_0)$ on the following year, where $w_0 = \text{months of overlap} / 12$.

Company	Consensus FY0 ends	Overlap with Apr-26 → Mar-27 (years)	Weight on FY0	Weight on FY1	Revenue FY0 (local m)	Revenue FY1 (local m)
Tata Consultancy Services	2027-03-31	1.00	1.00	0.00	2,909,605	3,038,222
Infosys	2027-03-31	1.00	1.00	0.00	1,948,595	2,022,423
HCL Technologies	2027-03-31	1.00	1.00	0.00	1,422,896	1,508,630
Wipro	2027-03-31	1.00	1.00	0.00	987,540	1,017,461
Tech Mahindra	2027-03-31	1.00	1.00	0.00	635,754	671,385
Persistent Systems	2027-03-31	1.00	1.00	0.00	183,998	212,788
Accenture	2026-08-31	0.42	0.42	0.58	73,566	76,589
Cognizant	2026-12-31	0.75	0.75	0.25	22,197	23,254
EPAM Systems	2026-12-31	0.75	0.75	0.25	5,657	5,858

Reading: an Indian peer's FY0 already coincides with the window (weight 1.0). Cognizant's calendar 2026 covers nine of the twelve months (weight 0.75). Accenture's year to August 2026 covers five months (weight 0.42), so most of its calendarised figure comes from FY2027. Without this step Accenture would be compared on a period ending seven months earlier than TCS's.
